

Installing the CREaTE Xtension

Note that in order for the CREaTE Xtension in the Scan Manager software to work with an existing installation of the Create tools, the ctgui.ini file must be edited as follows:

```
[CREaTE XTension]
CTX Directory=c:\scanman\raster~1
CTX FileName=Ctr4.exe
```

```
[Main Options]
Units=Inches
Resolution=800
Colours=32K+
Batch Mode=Off
Batch Prefix=batc
Batch Next Number=0
Image Directory=USE_EXE_DIR
Update Scan Length=Off
IAT Expert Mode=Off
```

```
[Engineer Options]
IAT Dialog Mode=Off
```

The CTX Directory entry must contain the full path of the directory containing the Create tools. Note that 8.3 filename convention must be used - i.e. type in the pathname as it would appear following a dir command in a DOS window.

Similarly, the CTX FileName entry must contain the executable name, also in 8.3 format.
